Bibliography

FOREWORD

The Calendaring and Scheduling Consortium (“CalConnect”) is a global non-profit organization with the aim to facilitate interoperability of collaborative technologies and tools through open standards.

CalConnect works closely with international and regional partners, of which the full list is available on our website (<https://www.calconnect.org/about/liaisons-and-relationships>).

The procedures used to develop this document and those intended for its further maintenance are described in the CalConnect Directives.

In particular the different approval criteria needed for the different types of CalConnect documents should be noted. This document was drafted in accordance with the editorial rules of the CalConnect Directives.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CalConnect shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be provided in the Introduction.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

This document was prepared by Technical Committee *VCARD*.

INTRODUCTION

Personal names are among the most commonly exchanged information on the Internet.

This International Standard facilitates the interchange and interaction of names between humans and applications without loss of fidelity.

1. SCOPE

This document specifies the “personal name” data model, suitable for the machine encoding of personal names, for digital storage and transmission of the following data elements:

- personal name components,
- cultural name profiles for personal name patterns,
- template for displaying personal names.

This document does not handle the linkage of a personal name to an identity.

The personal name model is used to encode a person’s personal names for:

- as a static data element
- as an interoperable data structure used with databases

The cultural name profile model is used to guide rendering of a name model instance as a string as appropriate to the applied cultural name profile.

The usage of this personal name model also applies to the following business cases:

- bibliographic management
- business cards (such as vCard)
- personal identification documents
- electronic messaging, e-commerce
- travel industry
- postal

2. NORMATIVE REFERENCES

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

- ISO 639-1, *Codes for the representation of names of languages – Part 1: Alpha-2 code*
- ISO 15924, *Information and documentation – Codes for the representation of names of scripts*

3. TERMS AND DEFINITIONS

For the purposes of this document, the following terms and definitions apply.

???:

3.1. name

verbal *designation* (ISO 5127:2017, Clause 3.1.5.24) of an *individual concept* (ISO 5127:2017, Clause 3.1.2.16)

[SOURCE: ISO 5127:2017, Clause 3.1.5.28]

3.2. person

human being

[SOURCE: ISO/IEC TS 29003:2018, Clause 3.12]

3.3. personal name

anthroponym

name (Clause 3.1) of a *person* (Clause 3.2)

[SOURCE: ISO 5127:2017, Clause 3.1.5.43, modified – preferred term *personal name* used in this document, replaced term *human being* with term *person* used in this document.]

3.4. locale

definition of the subset of a user's environment that depends on language and cultural conventions

[SOURCE: ISO/IEC/IEEE 9945:2009, Clause 4.211]

3.5. criterion

threshold or value of a variable to be met

[SOURCE: ISO/TS 14198:2012, Clause 3.2]

3.6. name display profile

profile that associates a set of *criteria* (Clause 3.5) and *layout templates* (Clause 3.12)

3.7. data type

set of representable values

[SOURCE: ISO/IEC 9075-1:2016, Clause 3.1.1.4]

3.8. primitive type

pre-defined basic datatype without any substructure, such as an integer or a string

[SOURCE: ISO 14813-5:2010, Clause B.1.118]

3.9. localized string

user-context-dependent string determined by a particular *locale* (Clause 3.4)

[SOURCE: ISO/IEC 20944-1:2013, Clause 3.21.10.2, modified — added reference to term *locale*]

3.10. template fragment

localized string (Clause 3.9) or *name component* (Clause 3.11) used in a *name display template* (Clause 3.12)

3.11. name component

component that forms part of a *personal name* (Clause 3.3)

3.12. name display template

specification of ordering of *template fragments* (Clause 3.10) for a *name display profile* (Clause 3.6) of a *cultural name display profile* (Clause 3.13)

3.13. cultural name display profile

set of *name display profiles* (Clause 3.6) pertaining to a particular *culture* (Clause 3.14)

3.14. culture

pattern of beliefs and expectations shared by the organization's members

Note 1 to entry:

[SOURCE: ISO/TR 14105:2011, Clause 2.1]

3.15. language identifier

language symbol

symbol that uniquely identifies a particular language

[SOURCE: ISO/IEC 639-3:2007, Clause 3.3]

3.16. script

set of graphic characters used for the written form of one or more languages

[SOURCE: ISO 15924, Clause 3.7]

3.17. script code

combination of characters used to represent the name of a *script* (Clause 3.16)

[SOURCE: ISO 15924, Clause 3.8]

3.18. URI

compact sequence of characters that identifies an abstract or physical resource

[SOURCE: ISO 12234-3:2016, Clause 3.4]

3.19. style

TODO.

3.20. honorific

TODO.

4. PERSONAL NAME

4.1. General

A personal name is represented by the following model.

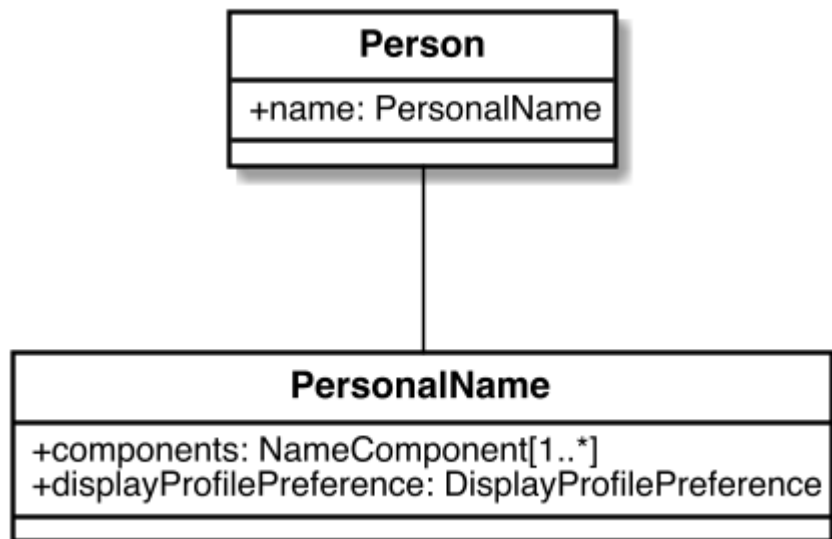

Figure 1

4.2. Data types

These are the basic data types used in this document.

Figure 2

5. NAME COMPONENT

5.1. General

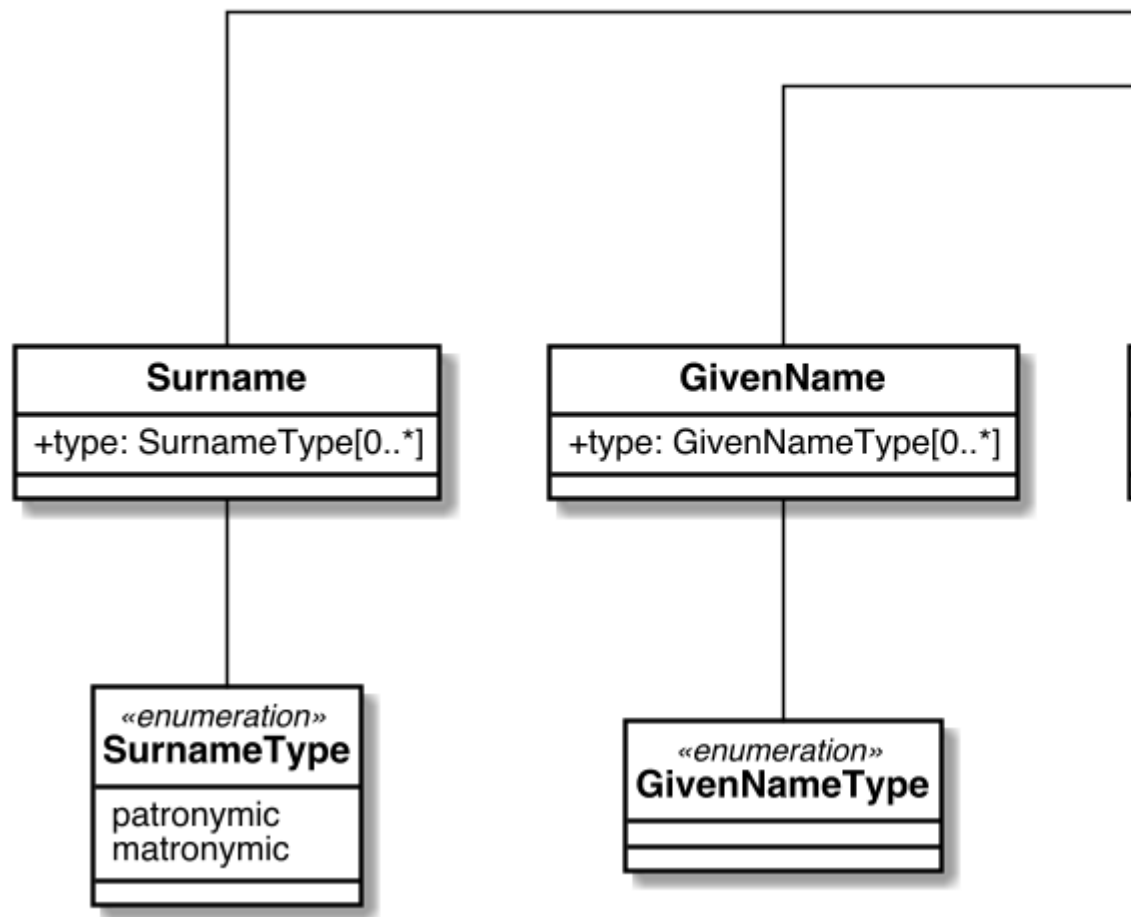

Figure 3

Common attributes:

- Date active to expiry

Founding father of the Republic of China: “Sun Yat-sen”

- Birth name: “Man” (□)
- “pet-name”: “Tai Tseung” (□□)
- “genealogical name”: “De Ming” (□□)
- Courtesy name: “Jai Ji” (□□)

- Baptised name: “Yat Sun” (葉孫)
- “art-name”: “Yat Sen” (葉善)
- Popular name: “孫中山” (Sun Zhongshan)
- Japanese name: “中山秀雄” (Nakayama Sho)

“Pablo Diego José Francisco de Paula Juan Nepomuceno María de los Remedios Cipriano de la Santísima Trinidad Ruiz y Picasso”

- Known as “Pablo Ruiz y Picasso”
 - Nickname? Alternative form of full name? Responsive display? Self-preference?
- Given name: “Pablo”
- Paternal family name: “Ruiz”
- Maternal family name: “Picasso”

Former President of India: “A. P. J. Abdul Kalam”

- Full name: Avul Pakir Jainulabdeen Abdul Kalam
- Styled title: “His Excellency Dr. A.P.J. Abdul Kalam”
- Patronymic component: “Avul Pakir Jainulabdeen”

Bill Gates

- Name: William Henry Gates III KBE
- Nickname: Bill
- Q: How do we show “Bill Gates”?
- Popular name: Bill Gates?

5.2. Anonymous

Sometimes people don’t want to be known.

5.3. Unknown

Sometimes people are simply not known. (TODO: treat it as Anonymous?)

5.4. Pseudonym

- Stage name
- Nickname

A pseudonym or alias is a name that a person or group assumes for a particular purpose, which can differ from their first or true name (orthonym).

Pseudonyms include stage names and user names, ring names, pen names, nicknames, aliases, superhero or villain identities and code names, gamer identifications, and regnal names of emperors, popes, and other monarchs. Historically, they have often taken the form of anagrams, Graecisms, and Latinisations, although there are many other methods of choosing a pseudonym.

5.5. Surname

A surname, family name, or last name is the portion (in some cultures) of a personal name that indicates a person's family (or tribe or community, depending on the culture). Depending on the culture, all members of a family unit may have identical surnames or there may be variations based on the cultural rules.

5.5.1. Compound surname

5.5.2. Icelandic name (TODO: reword)

5.5.3. Patrilineal surname

5.5.4. Matrilineal surname

5.5.5. Matronymic

```
<surname>  
  <type>matronymic</type>  
  <value>Helguson</value>  
</surname>
```

5.5.6. Patronymic

A patronymic surname is a surname originated from the given name of the father or a patrilineal ancestor. Different cultures have different ways of producing patronymic surnames.

EXAMPLE

Mongolian: Otryadyn Gündegmaa, O. Gündegmaa, Otryadyn is the patronymic surname

5.5.7. Maiden name

5.5.8. Others

5.5.9. Mononymous

Some people have no surname.

However, in some areas of the world, many people are known by a single name, and so are said to be mononymous. Still other cultures lack the concept of specific, fixed names designating people, either individually or collectively. Certain isolated tribes, such as the Machiguenga of the Amazon, do not use personal names.

NOTE Mononymic name is considered as a given name without a surname.

5.6. Given name

Diagram of naming conventions, using John Fitzgerald Kennedy as an example. First names can also be called given names, and last names (surnames) can also be called family names. This shows a structure typical for English-speaking cultures (and some others). Other cultures use other structures for full names.

The sarcophagus of Queen Desideria at Riddarholm Church in Sweden. The name was given to Desideria Clary not at birth but when she was created Crown Princess of Sweden in 1810.

A given name (also known as a first name, forename or Christian name) is a part of a person's personal name. It identifies a specific person, and differentiates that person from the other members of a group (typically a family or clan) who have a common surname. The term given name refers to the fact that the name usually is bestowed upon a person, normally to a child by his or her parents at or close to the time of birth. A Christian name, a first name which historically was given at baptism, is now also typically given by the parents at birth.

In informal situations, given names are often used in a familiar and friendly manner. In more formal situations, a person's surname is more commonly used a distinction needs to be made between people with the same surname. The idioms "on a first-name basis" and "being on first-name terms" refer to the familiarity inherent in addressing someone by their given name.

By contrast, a surname (also known as a family name, last name, or gentile name), which is normally inherited, is typically shared with other members of one's immediate family. Regnal names and religious or monastic names are special given names bestowed upon someone receiving a crown or entering a religious order. Such a person then typically becomes known chiefly by that name.

In many Western cultures, people often have more than one given name. One of those which is not the first in succession might be used exclusively as the name which that person goes by, such as in the cases of John Edgar Hoover and Mary Barbara Hamilton Cartland.

5.6.1. Arabic name

Arabic names were historically based on a long naming system; most Arabs did not have given/middle/family names, but a full chain of names. This system was mainly in use throughout the Arab world.

- Ism, given name, first name or personal name
- Laqab, surname, nickname, title, honorific
- Nasab, patronymic series
- Nisbah, surname
- Kunya, teknonym (name of first son or daughter) or nickname

5.6.2. Religious name

5.6.2.1. Christian name, baptismal name, confirmation name

5.6.2.2. Papal name

5.6.3. Generational name

EXAMPLE 1

Jose Maria Rodrigues Jr.

EXAMPLE 2

King George VI

5.6.4. Posthumous name

5.7. Honorific

5.7.1. General

NOTE Bibliographic entries often encounter this problem of separation of name and honorifics

Categories of honorifics

- Social
- Professional
- Royal
- Honors
- Academic

EXAMPLE 1

“Mr.”, “Ms.”

A style of office or honorific is an official or legally recognized title. A style, by tradition or law, precedes a reference to a person who holds a post or political office, and is sometimes used to refer to the office itself. An honorific can also be awarded to an individual in a personal capacity. Such styles are particularly associated with monarchies, where they may be used by a wife of an office holder or of a prince of the blood, for the duration of their marriage. They are also almost universally used for presidents in republics and in many countries for members of legislative bodies, higher-ranking judges and senior constitutional office holders. Leading religious figures also have styles.

An honorific is a title that conveys esteem or respect for position or rank when used in addressing or referring to a person. Sometimes, the term “honorific” is used in a more specific sense to refer to an honorary academic title. It is also often conflated with systems of honorific speech in linguistics, which are grammatical or morphological ways of encoding the relative social status of speakers.

Typically, honorifics are used as a style in the grammatical third person, and as a form of address in the second person. Use in the first person, by the honored dignitary, is uncommon or considered very rude and egotistical. Some languages have anti-honorific (despective or humilific) first person forms (expressions such as “your most humble servant” or “this unworthy person”) whose effect is to enhance the relative honor accorded to the person addressed.

Different types of honorific:

- Name: Elizabeth Angela Marguerite Bowes-Lyon
- An address: Her Majesty Queen Elizabeth The Queen Mother
- Her Majesty: style
- Queen: title
- Elizabeth: given name
- The Queen Mother: nick name?

Titles and styles

- 4 August 1900 – 16 February 1904: The Honourable Elizabeth Bowes-Lyon
- 16 February 1904 – 26 April 1923: Lady Elizabeth Bowes-Lyon
- 26 April 1923 – 11 December 1936: Her Royal Highness The Duchess of York
- 11 December 1936 – 6 February 1952: Her Majesty The Queen
- 11 December 1936 – 14 August 1947 (for British India): Her Imperial Majesty The Queen-Empress
- 6 February 1952 – 30 March 2002: Her Majesty Queen Elizabeth the Queen Mother
- Duchess: rank
- of: rank association word
- York: rank association place name

EXAMPLE 2

<pre> <style>urn:iso:name:style:uk:hrh</style> <honorific> <rank> <type>urn:iso:name:honorific:rank:duchess</type> <place>York</place> </rank> </honorific> </pre>
<pre> <urn:rank> Duchess <urn:rank:place> <urn:rank:place:association> of </urn:rank:place:association> York </pre>

<pre></urn:rank:place> </urn:rank></pre>
--

5.7.2. Style of office

A style of office or honorific is an official or legally recognized title. A style, by tradition or law, precedes a reference to a person who holds a post or political office, and is sometimes used to refer to the office itself. An honorific can also be awarded to an individual in a personal capacity. Such styles are particularly associated with monarchies, where they may be used by a wife of an office holder or of a prince of the blood, for the duration of their marriage. They are also almost universally used for presidents in republics and in many countries for members of legislative bodies, higher-ranking judges and senior constitutional office holders. Leading religious figures also have styles.

Concerns:

- a person who's a judge in both US and in UK: need both encoded, since their displays would be different

EXAMPLE

- His/Her Honour Judge X (abbreviation HHJ X, oral address Your Honour) – Circuit judges in England and Wales
- The Honourable Mr./Ms. Justice X (abbreviation X J, referential His Lordship/Her Ladyship; oral address My Lord/Lady or Your Lordship/Your Ladyship) – Judges of the High Court of Justice of England and Wales
- The Right Honourable Lord/Lady Justice X (abbreviated to X LJ) – Judge of the Court of Appeal of England and Wales
- (The) Lord/Lady/The Baroness X (abbreviated to Lord/Baroness X, referred to as His Lordship/Her Ladyship, addressed orally as My Lord/My Lady) – Judges in the High Court of Justiciary and the Court of Session in Scotland, and the Supreme Court of the United Kingdom
- The Honorable (abbreviation The Hon. (Full Name), oral address Your Honor) – Judges and Justices in the United States

5.7.3. Rank

EXAMPLE

Esquire as a social rank in UK (lawyer in US)

5.7.4. Position

5.7.5. Qualification

- “Dr.”
- “J.D.”
- “M.D.”
- “Ph.D.”
- “Ir.”

5.7.6. Occupation

- “Doctor”
- “Esquire”
- “Captain”
- “Coach”
- “Officer”
- “Reverend”
- “Father”
- “Rabbi”
- “Professor”

5.7.7. Role

EXAMPLE

Ex-President

5.7.8. Honors

- OBE
- JP
- CBE
- ...

5.8. Localization

You don't know my name until you know me.

– Japanese saying

EXAMPLE 1

□□ can be read as Daiwa or Yamato

EXAMPLE 2

□□□ can be read as Tōkairin or Shōji (example from W3C)

6. NAME PATTERN

6.1. Name order

The order given name - family name, commonly known as the Western order, is used throughout most European countries and in countries that have cultures predominantly influenced by European culture, including North and South America; North, East, Central and West India; Australia, New Zealand, and the Philippines.

The order family name - given name, commonly known as the Eastern order, is primarily used in East Asia (for example in China, Japan, Korea, Malaysian Chinese, Singapore, and Vietnam, among others), as well as in Southern and North-Eastern parts of India, and in Hungary. This order is common also in Austria and Bavaria, and in France, Belgium, Greece and Italy, possibly because of the influence of bureaucracy, which commonly puts the family name before the given name. In China and Korea, part of the given name may be shared among all members of a given generation within a family and extended family or families, in order to differentiate those generations from other generations.

The order given name - father's family name - mother's family name is commonly used in Spanish-speaking countries to acknowledge the families of both parents. Today the order can also be changed legally in Spain and Uruguay using given name - mother's family name - father's family name.

6.2. Name order systems

There is a range of personal naming systems:

Binomial systems: apart for given name, people are described by their surnames, which they obtain from one of their parents. Most modern European personal naming systems, such as Russian and Spanish, are of this type.

Patronymic systems: apart for given name, people are described by their patronymics, that is given names (not surnames) of parents or other ancestors. Such systems were in wide use throughout Europe in the first millennium C.E., but were replaced by binomial systems. Icelandic system is still patronymic.

More complex systems like Arabic system, consisting of paedonymic (son's name), given name, patronymic and one or two bynames.

Different cultures have different conventions for personal names. This is a list of articles about particular cultures' naming conventions.

6.3. Abbreviation

EXAMPLE

“Pablo Diego José Francisco de Paula Juan Nepomuceno María de los Remedios Cipriano de la Santísima Trinidad Ruiz y Picasso” becomes “Pablo Ruiz y Picasso”.

7. NAME PROFILE

7.1. General

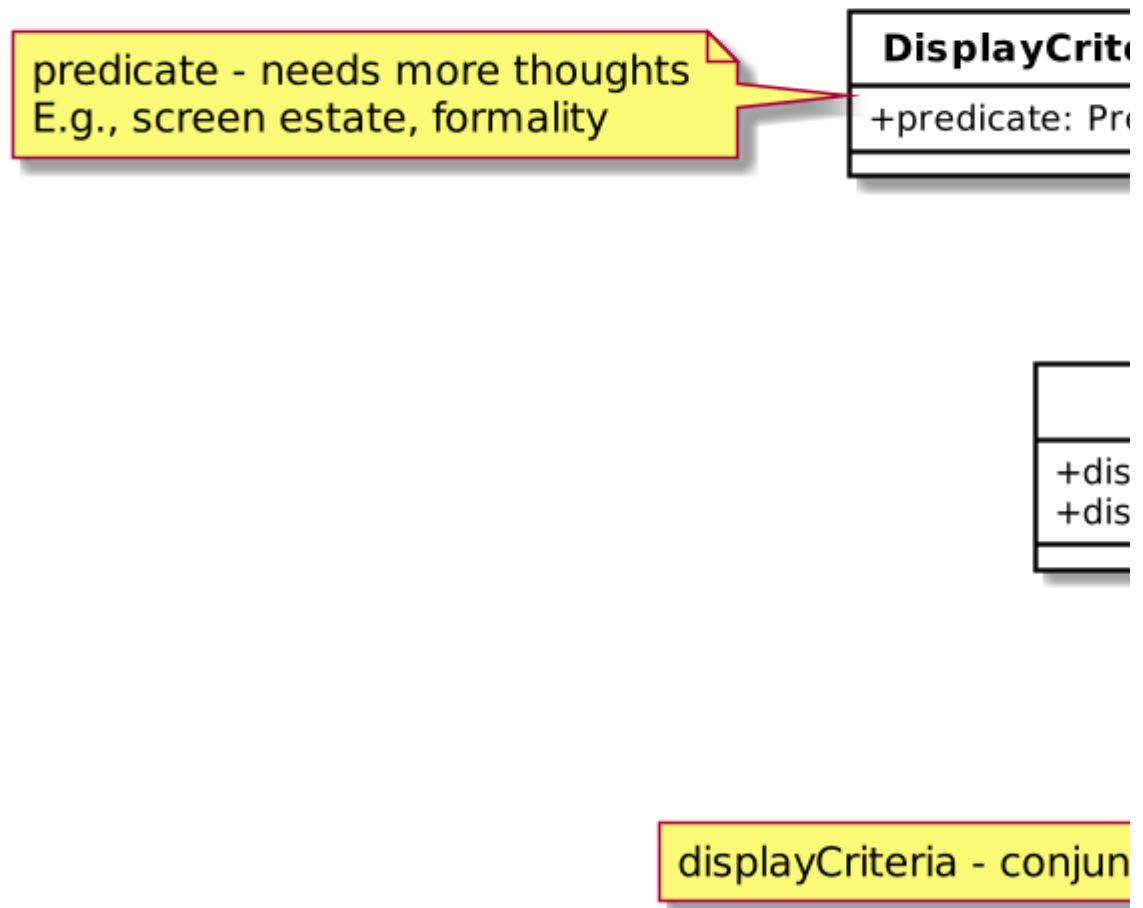

Figure 4

7.2. Rendering of name

- Preference of presentation

- Contextual presentation: formal, informal, etc.

Concern:

- abbreviation
- priority

Given a fixed-width, how best to render an abbreviated name (with honorifics) that is appropriate.

APPENDIX A (NORMATIVE) ENUMERATION OF NAME COMPONENTS

APPENDIX B (INFORMATIVE) CULTURAL NAMING CUSTOMS

B.1. English

English names are names used in, or originating in, England. In England as elsewhere in the English-speaking world, a complete name usually consists of a given name, commonly referred to as a first name or Christian name, and a (most commonly patrilineal) family name or surname, also referred to as a last name. There can be several given names, some of these being often referred to as a second name, or middle name(s).

English surnames appeared in about the 11th century. The introduction of parish registers in 1538 contributed significantly to the stabilization of the surname system, but it was not until the late 17th century that fixed surnames were introduced throughout England.

Double-barrelled names may be formed for a variety of reasons, including combining of spouses' surnames upon marriage or, more commonly in the past, adding another family's surname as a condition of inheritance.

Compound surnames in English feature two words, often joined by a hyphen or hyphens, for example Henry Hepburne-Scott, with some families having as many as three or four words making up their surname, such as Charles Hepburn-Stuart-Forbes-Trefusis, 21st Baron Clinton and Alexander Charles Robert Vane-Tempest-Stewart, 9th Marquess of Londonderry. However, it is not unusual for compound surnames to be composed of separate words not linked by a hyphen, for example Iain Duncan Smith, a former leader of the Conservative Party, whose surname is "Duncan Smith".

B.2. French

French people have one, two or more given names (first names). One of them (nowadays almost always the first, in the past often the last) is used in daily life (but someone can also choose a usage name that was not given); the others are solely for official documents, such as passport, birth, death and marriage certificates. Thus, one always speaks of Jacques Chirac and never of Jacques René Chirac; and Henri Philippe Pétain is always referred to as Philippe Pétain (or Marshal Pétain), because Philippe was the given name that he used in daily life. Middle names in the English sense do not exist, and middle initials are never used for second or further given names. For example, although English-speaking scientific publications may cite Claude Allègre as Claude J. Allègre, this is never done in France. Typically, second and further given names may be somewhat old-fashioned, given in honour of the child's grandparents etc., though such practice has now become less common. As with English, however, a person may choose to use any one (or several) of their names, relegating the unused names to the birth certificate. Although using more than one name is nowadays out of fashion, using two or even three of the given names as a compound name was fairly common until the early 20th century.

In France, until 1 January 2005, children were required by law to take the surname of their father. If the father was unknown, the child had the family name of the mother. Since 1 January 2005, article 311-21 of the French Civil code permits parents to give their children either the name of their father, mother, or a hyphenation of both - although no more than two names can be hyphenated. In cases of disagreement, both parents' family names are hyphenated in alphabetic order with only the first of their names if they have a hyphenated name themselves. This brought France into line with a 1978 declaration by the Council of Europe requiring member governments to take measures to adopt equality of rights in the transmission of family names, a measure that was echoed by the United Nations in 1979. Similar measures were adopted by Germany (1976), Sweden (1982), Denmark (1983), Spain (1999) and Austria (2013).

B.3. German

Personal names in German-speaking Europe consist of one or several given names (Vorname, plural Vornamen) and a surname (Nachname, Familienname). The Vorname is usually gender-specific. A name is usually cited in the "Western order" of "given name, surname", unless it occurs in an alphabetized list of surnames, e.g. "Bach, Johann Sebastian".

In this, the German conventions parallel the naming conventions in most of Western and Central Europe, including English, Dutch, Italian, and French. There are some vestiges of a patronymic system as they survive in parts of Eastern Europe and Scandinavia, but these do not form part of the official name.

The Vorname (in English forename) is usually given to a child by the parents shortly after birth. It is common to give a child several Vornamen (forenames), one of them intended for everyday use and known as the Rufname ("appellation name" or "call name"). This Rufname is often underlined on official documents, as it is sometimes the second or third name in the sequence of given names on official record, even though it is the given name in daily use from childhood. For example, in the resume submitted by mathematician Emmy Noether to Erlangen University in 1907,

Surnames (family name; Nachname, Familienname) were gradually introduced in German-speaking Europe during the Late Middle Ages. Many of such surnames are derived from nicknames. They are generally classified into four groups by derivation: given names, job designations, bodily attributes, and toponyms (including references to named buildings). Also, many family names display characteristic features of the dialect of the region they originated in.

B.4. Italian

A name in Italian consists of a given name (nome) and a surname (cognome). Surnames are normally written after given names. In official documents, the surname may be written before given names. In speech, the use of given name before family name is

standard in an educated style, but, due to bureaucratic influence, the opposite was common (but now it's deprecated).

Italian names, with their fixed nome + cognome structure, have little to do with the ancient Roman naming conventions, which used a tripartite system of given name + gentile name + hereditary or personal name or names. E.g., the Italian nome is not analogous to the ancient Roman nomen, since the former is the given name (distinct between siblings), while the latter the gentile name (inherited, thus shared by all belonging to a gens). Female name giving tradition and name changing rules after adoption for both sexes also differ between Roman antiquity and modern Italian use. Moreover, the low number and steady decline of importance and variety of Roman praenomina is in stark contrast with the current number of Italian given names.

Italy and Italians have the largest collection of surnames (cognomi) of any ethnicity in the world, with over 350,000. Men—except slaves—in ancient Rome always had hereditary surnames, i.e., nomen (clan name) and cognomen (side-clan name). However, the multi-name tradition was lost by the Middle Ages. Outside the aristocracy, where surnames were often patronymic or those of manors or fiefs, most Italians began to assume hereditary surnames around 1450.

B.5. Japanese

Japanese names (日本人名 Nihonjin no Shimei) in modern times usually consist of a family name (surname), followed by a given name. More than one given name is not generally used. Japanese names are usually written in kanji, which are characters usually Chinese in origin but Japanese in pronunciation. The kanji for a name may have a variety of possible Japanese pronunciations, hence parents might use hiragana or katakana when giving a birth name to their newborn child. Names written in hiragana or katakana are phonetic renderings, and so lack the visual meaning of names expressed in the logographic kanji.

Japanese family names are extremely varied: according to estimates, there are over 100,000 different surnames in use today in Japan. The three most common family names in Japan are Satō (佐藤), Suzuki (鈴木), and Takahashi (高橋). This diversity is in stark contrast to the situation in other nations of the East Asian cultural sphere, which reflects a different history: while Chinese surnames have been in use for millennia and were often reflective of an entire clan or adopted from nobles (with or without any genetic relationship) and were thence transferred to Korea and Vietnam via noble names, the vast majority of modern Japanese family names date only to the 19th century, following the Meiji restoration, and were chosen at will. The recent introduction of surnames has two additional effects: Japanese names became widespread when the country had a very large population (over 30 million during the early Meiji era – see Demographics of Imperial Japan) instead of dating to ancient times (estimated population at 1 CE is 300,000, for instance – see Demographics of Japan before Meiji Restoration), and since little time has passed, Japanese names have not experienced as significant a surname extinction as has occurred in the much longer history in China.

Surnames occur with varying frequency in different regions; for example, the names Chinen (石嶺), Higa (比嘉), and Shimabukuro (志摩重太郎) are common in Okinawa but not in other parts of Japan; this is mainly due to differences between the language and culture of Yamato people and Okinawans. Many Japanese family names derive from features of the rural landscape; for example, Ishikawa (石川) means “river of the stones”, Yamamoto (山本) means “the base of the mountain”, and Inoue (井上) means “above the well”.

While family names follow relatively consistent rules, given names are much more diverse in pronunciation and character usage. While many common names can easily be spelled or pronounced, many parents choose names with unusual characters or pronunciations, and such names cannot in general be spelled or pronounced unless both the spelling and pronunciation are given. Unusual pronunciations have especially become common, with this trend having increased significantly since the 1990s. For example, the popular masculine name 大田 is traditionally pronounced “Hiroto”, but in recent years alternative pronunciations “Haruto”, “Yamato”, “Taiga”, “Sora”, “Taito”, “Daito”, and “Masato” have all entered use.

B.6. Korean

A Korean name consists of a family name followed by a given name, as used by the Korean people in both South Korea and North Korea. In the Korean language, ireum or seongmyeong usually refers to the family name (seong) and given name (ireum in a narrow sense) together.

Traditional Korean family names typically consist of only one syllable. There is no middle name in the English language sense. Many Koreans have their given names made of a generational name syllable and an individually distinct syllable, though this practice is declining in the younger generations. The generational name syllable is shared by siblings in North Korea, and by all members of the same generation of an extended family in South Korea. Married men and women usually keep their full personal names, and children inherit the father’s family name.

The family names are subdivided into bon-gwan (clans), i.e. extended families which originate in the lineage system used in previous historical periods. Each clan is identified by a specific place, and traces its origin to a common patrilineal ancestor.

Early names based on the Korean language were recorded in the Three Kingdoms period (57 BCE – 668 CE), but with the growing adoption of the Chinese writing system, these were gradually replaced by names based on Chinese characters (hanja). During periods of Mongol influence, the ruling class supplemented their Korean names with Mongolian names.

Because of the many changes in Korean romanization practices over the years, modern Koreans, when using languages written in Latin script, romanize their names in various ways, most often approximating the pronunciation in English orthography. Some keep the original order of names, while others reverse the names to match the usual Western pattern.

B.7. Jewish

The Jewish name has historically varied, encompassing throughout the centuries several different traditions. This article looks at the onomastics practices of the Jewish people, that is, the history of the origin and forms of proper names.

Jews have historically used Hebrew patronymic names. In the Jewish patronymic system the first name is followed by either ben- or bat- (“son of” and “daughter of,” respectively), and then the father’s name. (Bar-, “son of” in Aramaic, is also seen). Permanent family surnames exist today but only gained popularity among Sephardic Jews in Iberia and elsewhere as early as the 10th or 11th century and did not spread widely to the Ashkenazic Jews of Germany or Eastern Europe until the 18th and 19th century, where the adoption of German surnames was imposed in exchange for Jewish emancipation. An exception was members of the Cohanim (priestly caste) and Levites (descendants of Levi) who performed certain religious duties, who had always appended the surname Cohen and Levi respectively (modern spelling in English may vary) which was usually preceded by “ha” meaning “the” in Hebrew.

Although Ashkenazi Jews now use European or modern-Hebrew surnames for everyday life, the Hebrew patronymic form is still used in Jewish religious and cultural life. It is used in synagogue and in documents in Jewish law such as the ketubah (marriage contract).

B.8. Thai

Thai names are comparable to the Western European pattern in which the family name follows a first or given name. In this they differ from the family-name-first pattern of the general East Asian tradition.

Thai names (given and family) are often long, and there are a great many of them. The diversity of family names is because they are required to be unique to a family, and they are a recent introduction. Also, a number of Thai people change their given names relatively frequently (and their family names less frequently, as it requires permission of the head of a family or, in the case of children, father and mother). This practice is virtually unknown in most other countries outside of marriage and fortune-telling traditions. Besides standard reasons of separation and divorce, many name changes are done to get rid of bad luck (which, if caused by a ghost or spirit, would confuse the malignant entity, allowing the victim to get free from them).

Last names became legally required of Thai citizens in 1913. Before then, most Thais used only a first or individual name. The names generally convey positive attributes. Under Thai law, only one family can use any given surname: Thus, any two people of the same surname must be related.

Thai surnames are often long, particularly among Thais of Chinese descent. For example, the family of former Prime Minister Thaksin Shinawatra, who is of Chinese descent, adopted the name Shinawatra (“does good routinely”) in 1938. According to the current

law, Person Name Act, BE 2505 (1962), to create a new Thai surname, it must not be longer than ten Thai letters, excluding vowel symbols and diacritics. The same law also forbids the creation of a surname that duplicated any existing surnames. There are some duplicates dating to the time before computer databases were available to prevent this. Some creations added the name of their location (muban, tambon or amphoe) into surnames, similar to family name suffixes.

As a measure of the diversity of Thai names, in a sample of 45,665 names, 81% of family names were unique, and 35% of given names were unique: The people with shared family names are related, and the diversity of given names is conventional.[dead link]

B.9. Mongolian

Mongolian names have gone through certain revolutions in the history of Mongolia. In the first, traditional Mongolian names were replaced by Tibetan names, while in the second, Tibetan names were replaced by new Mongolian names rather different from those before the first naming revolution. In modern day, Inner Mongolian customs are similar to Mongolia, but do display some differences.

Mongolian names traditionally have an important symbolic character – a name with auspicious connotations being thought to bring good fortune to its bearer. The naming of children was usually done by the parents or a respected elder of the family or religious figures. For example, it is said that the prominent shaman, Teb-tengeri, saw in the stars a great future for Tolui's eldest son and bestowed on the child the name Möngke (meaning “eternal” in the Mongolian language).

Nowadays most parents give Mongolian names to their children, often consisting of two nouns or adjectives (in Mongolian grammar, it is considered a single word), representing qualities such as solidity and strength for boys or beauty in the case of girls.

Generally, the Mongols (unlike their southern neighbours, the Chinese) have only one personal name, which remains the same throughout their lives. While clan organization remained important among the Mongols into the 17th century, clan names were not linked with the personal name in a family name system. Clan name is still important among the Buryats and to a lesser extent among Kalmyks today. While the personal name of the living ruler was not originally tabooed, as in China, the names of deceased rulers were tabooed for several generations. In the past this prohibition was even stronger. In Mongolia and Inner Mongolia, the Mongols also use clan names.

B.10. Icelandic

Icelandic names differ from most current Western family name systems by being patronymic or occasionally matronymic: they indicate the father (or mother) of the child and not the historic family lineage. Iceland shares a common cultural heritage with the Scandinavian countries of Norway, Sweden and Denmark with the Faroe Islands. Icelanders, however, unlike other Nordics, have continued to use their traditional name

system, which was formerly used by all Nordic countries except partly Finland. The Icelandic system is thus not based on family names (although some people do have family names and might use both systems). Generally, a person's second name indicates the first name of their father (patronymic) or in some cases mother (matronymic). According to Icelandic naming tradition, second names end in -son or -dóttir with few exceptions.

Some family names do exist in Iceland, most commonly adaptations from last name patronyms Icelanders took up when living abroad, usually Denmark. Notable Icelanders who have an inherited family name include former prime minister Geir Haarde, football star Eiður Smári Guðjohnsen, entrepreneur Magnús Scheving, film director Baltasar Kormákur Samper, actress Anita Briem and member of parliament (and former news reporter) Elín Hirst. Before 1925, it was legal to adopt new family names; one Icelander to do so was the Nobel Prize-winning author Halldór Laxness, while another author, Einar Hjörleifsson and his brothers all chose the family name "Kvaran". Since 1925, one cannot adopt a family name unless one explicitly has a legal right to do so through inheritance. (The law was amended in 1991 and 1996.)

A man named Jón Einarsson has a son named Ólafur. Ólafur's last name will not be Einarsson like his father's; it will become Jónsson, literally indicating that Ólafur is the son of Jón (Jóns + son). The same practice is used for daughters. Jón Einarsson's daughter Sigríður's last name would not be Einarsson but Jónsdóttir. Again, the name literally means "Jón's daughter" (Jóns dóttir).

In some cases, an individual's surname is derived from a parent's middle name instead of the first name. For example, if Jón is the son of Hjálmar Arnar Vilhjálmsson he may either be named Jón Hjálmarsson (Jón, son of Hjálmar) or Jón Arnarsson (Jón, son of Arnar). The reason for this may be that the parent prefers to be called by the middle name instead of the first name; this is fairly common. It may also be that the parent's middle name seems to fit the child's first name better.

In cases where two people in the same social circle bear the same first name and the same father's name, they have traditionally been distinguished by their paternal grandfather's name, e.g. Jón Þórsson Bjarnarsonar (Jón, son of Þór, son of Bjarni) and Jón Þórsson Hallssonar (Jón, son of Þór, son of Hallur). This practice has now become less common (the use of middle names having replaced it), but features conspicuously in the Icelandic sagas.

B.11. Indian

Indian family names are based on a variety of systems and naming conventions, which vary from region to region. Names are also influenced by religion and caste and may come from epics. India's population speaks a wide variety of languages and nearly every major religion in the world has a following in India. This variety makes for subtle, often confusing, differences in names and naming styles. Due to historical Indian cultural

influences, many names across South and Southeast Asia are influenced or adaptations of Indian names or words.

For some Indians, their birth name is different from their official name; the birth name starts with a randomly selected from the person's horoscope (based on the nakshatra or lunar mansion corresponding to the person's birth).

B.12. Indonesian

Indonesians do not generally use a given or first name and a family, last or surname name. The majority of Indonesians do not have family names. Rather, their given names are geographically and culturally specific. Names beginning with "Su" in Indonesian spelling ("Soe" in Dutch orthography), or ending with an "o" are usually Javanese people. For example, people called "Suprpto" or "Soeprpto, Joko" are likely to be of Javanese descent. Suharto is another example.

Balinese names are quite distinct, as they have a naming system which denotes birth order. Wayan means first born. Made means second born. A Balinese name may also indicate caste. For instance, a Kshatriya person may be named "I Gusti".

"Sitompul" and "Rajagukguk" are clan names usually found in people with Batak or North Sumatran heritage.

In general, Indonesian names fall into one of the following categories:

A single name, such as Sukarno and Suharto
Two (or more) names without a family name, such as Susilo Bambang Yudhoyono
Two (or more) names with a family name such as Abdul Haris Nasution or Mahyadi Panggabean
Two (or more) names with a patronymic, such as Megawati Sukarnoputri or Abdurrahman Wahid

Until recently, most Indonesians did not have family names. Both men and women usually have a given name and then take the name of their father as a last name. Some, but not all, married Indonesian women take the last name of their husband. This name is usually added after their own "last" name. Therefore, it is not rare for married couples to have different last or family names.

Naming also differs regionally. Some Javanese, especially those of the old generation have only one name. Bataks have clan names which are used as their surnames. Some Chinese Indonesians have Chinese-style names. In Indonesian telephone directories, names are listed under the first or given name and not under the last or family name.

B.13. Eastern Slavic

Eastern Slavic naming customs are the traditional ways of identifying a person by name in countries influenced by East Slavic languages (Russian, Ukrainian and Belorussian: in Russia, Belarus, Ukraine. They are also used in some countries using South Slavic languages, including Bulgaria, Bosnia and Herzegovina, Serbia and Macedonia, as well as

some countries using non-Slavic languages (Kazakhstan, Kyrgyzstan, Uzbekistan and Turkmenistan) because of the expansion of Russia, with its Russification.

The full name uses the following standard structure:

Name Example (Cyrillic alphabet)	Example (Anglicised form)	First name (given name)
Илья́	Ilyá	Patronymic
Алекса́ндрович	Aleksándrovich	Family name (surname)
Ежо́в		Yezhóv

B.14. Manchu

Manchu names are the names of the Manchu people in their own language. In addition to such names, most modern Manchus live in China and possess Chinese names.

Traditionally, Manchus were called only by their given names in daily life although each belonged to a clan with its own clan name (Manchu: hala). Each clan would be divided into several sub-clans (mukūn), but these did not have separate names.

Manchus given names are distinctive. Generally, there are several forms, such as bearing suffixes “-ngga”, “-ngge” or “-nggo”, meaning “having the quality of”; bearing the suffixes “-tai” or “-tu”, meaning “having”; bearing the suffix, “-ju”, “-boo”; numerals or animal names.

Manchu given names were used solely or with titles but not with clan names. For example, Fiyanggū, who was from the Donggo clan, belonged to the Manchu Plain White Banner and distinguished himself in the campaigns against the Dzungars, was usually called “Fiyanggū be” (Lord Fiyanggū) since Fiyanggū (youngest) was a relatively major given name. Unlike Chinese and Europeans, he was not to be called by combination of family name and given name, i.e. Donggo Fiyanggū or Fiyanggū Donggo. Although we can find Aisin-Gioro Ulhicun and other figures, but it is a very modern practice. To specify the clan name, Manchus would have said something like “Donggo hala-i Fiyanggū” (Fiyanggū of the Donggo clan).

The Manchus had an immense variety of given names. For most of them, it is difficult to find the meanings. Some scholars try to categorize them. Erich Haenisch classified them into sixteen categories including animals (Eje: bull, Yelu: boar), plants (Fodo: willow, Maca: garlic), qualities (Ayan: big, Bayan: rich, Niowanggiyan: green), etc. Ch'en Chieh-hsien classified Manchu personal names into seven main categories. But there are many names that are not included in either categorization.

Some Manchu names seem nothing more than partial phonetic alternation of other ones. For example, the names of brothers of a clan were Ulušun, Hūlušun, Ilušun, Delušun, Fulušun and Jalušun in order of age, where only the initial syllables are changed. Another example is Nurhaci. His brothers were Šurgaci and Murhaci.

Like other non-Chinese terms, Manchu names are often transcribed into Chinese in a chaotic pattern since they were taken from Chinese sources. It is difficult to reconstruct original Manchu spellings from their Chinese transcription. Sometimes the first syllable

of a Manchu given name is misinterpreted as a Chinese surname. For instance, the Manchu official Tulišen, who wrote a famous travel record, is mistaken for a Chinese man named “Tu Lishen.”

Nikan (Han Chinese) was a common first name for Manchus. Nikan Wailan was a Jurchen leader who was an enemy of Nurhaci. Nikan was the name of one of the Aisin Gioro princes and grandsons of Nurhaci who supported Prince Dorgon. Nurhaci’s first son was Cuyen, one of whose sons was Nikan.

During the Qing Dynasty, the Manchus gradually adopted two-character Chinese given names (but not family names), and used Manchu transcription of them. We can find a tendency to leave a space between two syllables of the name of an exalted personage in the Manchu script and to stick them together for common people. For example, the real name of the Qianlong Emperor was Hung li, which was derived from the Chinese name Hongli (弘曆). Certain combinations of Chinese sounds that never appeared at native Manchu terms make it difficult to determine syllable boundaries. The Manchus introduced what is called “Mongolian Sibe Syllable Boundary Marker” in Unicode. As the name says, it is formalized in the Sibe script but can also be found in Manchu literature. The marker represented as the grapheme of the middle form of letter A is put on a syllable boundary so that we can distinguish Guangying (Guwang’ing) from Guanjing (Guwanging), etc.

B.15. Chinese

Chinese personal names are names used by those from mainland China, Hong Kong, Macau, Taiwan, and the Chinese diaspora overseas. Due to China’s historical dominance of East Asian culture, many names used in Korea and Vietnam are adaptations of Chinese names, or have historical roots in Chinese, with appropriate adaptation to accommodate linguistic differences.

Modern Chinese names consist of a surname known as xing (姓, xìng), which comes first and is usually but not always monosyllabic, followed by a personal name called ming (名, míng), which is nearly always mono- or disyllabic. Prior to the 20th century, educated Chinese also utilized a “courtesy name” or “style name” called zi (字, zì) by which they were known among those outside their family and closest friends.

In the first half of the 1st millennium BC, during the Zhou dynasty, members of the Chinese nobility could possess up to four different names—personal names (míng 名), clan names (xìng 姓), lineage names (shì 氏), and “style” or “courtesy” names (zì 字)—and up to two titles: standard titles (jué 爵), and posthumous titles (shì 諡 or shìhào 諡號). Commoners possessed only a personal name (ming), and the modern concept of a “surname” or “family name” did not yet exist at any level of society. The old lineage (shi) and clan names (xing) began to become “family names” in the modern sense and trickle down to commoners around 500 BC, during the late Spring and Autumn period, but the process took several centuries to complete, and it was not until the late Han dynasty (1st and 2nd centuries AD) that all Chinese commoners had surnames.
